## About Anadarko Petroleum

Anadarko is among the world's largest independent oil and natural gas exploration and production companies, with 1.44 BBOE of proved reserves at year-end 2017. Anadarko has operations around the globe including the Americas, Africa and Columbia. Anadarko's Significant 2017 operating and financial activities include the following:

- The Company's oil sales volumes averaged 355 MBbls/d, representing a 12% increase from 2016, primarily due to increased volumes from the Gulf of Mexico, partially offset by the divestiture of certain U.S. onshore assets in 2017 and 2016.
- The Company's overall sales-volume product mix increased to 53% oil in 2017, compared to 40% in 2016, which significantly improved margins and returns.

## Products Transported and Counties Involved

Product	Description	Health and Fire Hazards	Counties Involved
<b>Condensate</b>	<b>Leak:</b> Liquid <b>Vapor:</b> Heavier than air. Clear colorless liquid under pressure, hydrocarbon odor (rotten eggs). White cloud next to ground, noticeable gas stream blowing skyward, liquid collection on the ground and ice/frost collecting on the ground of leak site.	<b>Health:</b> May contain H <sub>2</sub> S, contains benzene and therefore is a cancer hazard, causes eye irritation and skin frostbite. Asphyxiant gas; high concentration can displace oxygen causing the feeling of suffocation	Dimmit La Salle Webb
<b>Crude Oil</b>	<b>Leak:</b> Liquid <b>Vapor:</b> Heavier than air Can be flammable. Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system.	<b>Health:</b> Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects. <b>Fire:</b> Crude oil is an extremely flammable liquid or vapor that is heavier than air. May accumulate in low areas, and may travel considerable distances to an ignition source.	
<b>Natural Gas</b>	<b>Leak:</b> Gas <b>Vapor:</b> Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.	<b>Health:</b> Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.	
<b>Produced Water</b>	<b>Leak:</b> Liquid <b>Vapor:</b> Refers to water originating from oil and gas exploration, production, and/or operation activities. Weight and density of produce water will vary depending upon geological formations and area it is produced.	<b>Health:</b> This water may potentially contain entrained hydrocarbons in either liquid or gaseous phase, as well as, contain elevated levels of chlorides. Produced water pipelines, gathering lines, vessels, and containers should be managed as flammable and in accordance with all state and federal laws.
