About Centurion Pipeline, L.P.

Centurion Pipeline, L.P. gathers and transports crude oil from the Permian Basin of West Texas and Southeastern New Mexico to Cushing, Oklahoma, Midland, Texas and Colorado City, Texas. Centurion’s pipeline system consists of approximately 1,800 miles of active transmission pipelines and approximately 1,000 miles of active gathering pipeline. Centurion’s throughput is approximately 500,000 barrels per day with over 5.2 million barrels of total active storage capacity. In southeastern New Mexico, and in the Permian Basin of west Texas, the pipeline crosses sparsely populated, flat, agricultural or oil-producing acreage. The pipeline continues in northeasterly direction across Texas and into Oklahoma, where it terminates at Cushing, Oklahoma.

Products Transported and Counties Involved

Product	Description	Health and Fire Hazards
Crude Oil	<p>Leak: Liquid</p> <p>Vapor: Heavier than air</p> <p>Can be flammable. Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system.</p>	<p>Health: Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects.</p> <p>Fire: Crude oil is an extremely flammable liquid or vapor that is heavier than air. May accumulate in low areas, and may travel considerable distances to an ignition source.</p>
