## About Delaware Basin Midstream

Delaware Basin Midstream, LLC (DBM) is a subsidiary of Western Gas Partners, LP. DBM owns and operates the DBM complex which includes a gathering system located in Culberson, Loving, and Reeves counties. The gas gathered is processed at the Ramsey Gas Plant in Orla, Texas.

Delaware Basin Midstream also operates oil, gas, and produced water systems for the Delaware Basin Joint Venture (DBJV) in Ward and Loving county.

## Products Transported and Counties Involved

| Product                | Description  | Health and Fire Hazards   |
|------------------------|--|---|
| <b>Natural Gas</b>     | <b>Leak:</b> Gas<br><b>Vapor:</b> Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.   | <b>Health:</b> Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.  |
| <b>Crude Oil</b>       | <b>Leak:</b> Liquid<br><b>Vapor:</b> Heavier than air. Can be flammable. Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system. | <b>Health:</b> Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects.<br><b>Fire:</b> Crude Oil is an extremely flammable liquid or vapor that is heavier than air. May accumulate in low areas, and may travel considerable distances to an ignition source.  |
| <b>Produced Water</b>  | <b>Leak:</b> Liquid<br><b>Vapors:</b> Not Available  | <b>Health:</b> Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects. Possible presence of H <sub>2</sub> S, a toxic gas.<br><b>Fire:</b> Flammable. Fire is associated with natural gas condensate floating on the surface of produced water. Runoff to sewer may create fire or explosion hazard downstream of the source. Gases may form explosive mixtures with air. |
| <b>Counties Served</b> | Culberson, Loving, Reeves and Ward   |   |
