About Kinder Morgan

Kinder Morgan is one of the largest energy infrastructure companies in North America. We own an interest in or operate in approximately 85,000 miles of pipeline and 152 terminals. Our pipeline transport natural gas, refined petroleum products, crude oil, carbon dioxide (CO₂) and more. Our terminals store and handle petroleum products, chemicals and other products.

We are a market leader in each of our businesses- Natural Gas Pipelines, CO₂, Terminals and Kinder Morgan Canada. We have unparalleled, large footprint of diversified and strategically located assets that are core to North American energy infrastructure and help deliver needed energy products to high-demand markets. For example, Kinder Morgan is:

- ✚ Largest natural gas network with approximately 70,000 miles of natural gas pipelines. We are connected to every important US natural gas resource play, including the Eagle Ford, Marcellus, Utica, Uinta, Haynesville, Fayetteville and Barnett. We move about 40 percent of the natural gas consumed in America.
- ✚ Largest independent transporter of petroleum products, transporting 2.1 million barrels of product per day. We move gasoline, jet fuel, diesel, crude, natural gas liquids and more.
- ✚ Largest transporter of carbon dioxide (CO₂), transporting about 1.3 billion cubic feet per day. Most of the CO₂ in enhanced oil recovery products in the Permian Basin of West Texas.
- ✚ Largest independent terminal operator. Our liquids terminal store refined petroleum products, chemicals, ethanol and more, and have a capacity of 152 million barrels. Our dry bulk terminals store and handle such materials as coal, petroleum coke and steel, and we handle 53 million tons per year. We also have a strong Jones Act shipping position with twelve vessels in service and four more to be delivered in 2017.
- ✚ Only oilsands pipeline serving the West Coast. We currently transport 300,000 barrels per day to Vancouver/Washington State and our proposed expansion will increase that capacity to 890,000 barrels per day.

Products Transported and Counties Involved

Product	Description	Health and Fire Hazards	Counties Involved
Natural Gas	Leak: Gas Vapor: Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.	Health: Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.	Collin, Delta, Fannin, Franklin, Hunt, Kaufman, Lamar, Morris, Red River, Rockwall, Titus
